

AirJet Cod. 3059

Description

This unit is simple and cheap and allows to atomize insecticides or disinfectant agents on tools and walls of Food Industry, or in cows/pigs breedings etc. It is operated by compressed air; the product is sucked from the container on the floor, and the mist is sprayed up to 6 meters. In the presence of animals it is also possible to saturate the room, without wetting the animal's skin, as normally happens when hydrowasher and pressurized water is used.

Main Features

<i>Compressed air</i>	<i>2 - 10 BAR</i>
<i>Lance length</i>	<i>340 mm.</i>
<i>Sucking hose STD.</i>	<i>2 mt.</i>
