

## Bimix P

### Code 3000

### Description

This unit allow to dilute two neat products, delivering the ready-to-use solution directly to the bottle, canister, bucket etc.

The minimum required water pressure is about 2 bar, and the concentrations can be set by a s.s. orifice plate, available in 15 sizes (one installed and others available on request).

The operator only needs to open the valve of the product to be diluted and then opens the water valve to let the solution flow to the bottle.

### Main features
